MEDIA WALL
3000W x 2200H

Bleed Area
Finished Size
Safe Artwork Area

How to set up your artwork:

1. Create your artwork in professional design software - incorrectly set up documents will incur an additional fee. If you need assistance please get in touch.
2. Ensure you use images that are a minimum of 300 dpi to start so that when they are re-scaled to the print size they won't lose quality. For best results: purchase or use the largest size available stock imagery or photography and use vector programs for all typography and place vector logos/graphics.
3. All images and graphics must be in CMYK Colour (or convert when saving to PDF)
4. Place your elements on the template, extending background colours/images to the media wall size, and keeping important information within the safe area. You can also re-size your artboard to the wall size. Delete TEMPLATE layer before saving your final document so only your artwork is displayed.
5. Embed and outline all images and fonts in final document
6. Save final document as PDF for Print
7. Artwork can returned via WeTransfer or email:
   quotes@rogueprintandmail.com.au | rogueprintandmail.wetransfer.com

This template is a 1:1 Scale

Colours printed with ink on different media look different to colours displayed on a computer screen. Your artwork MUST be set up in CMYK colours. Please note that precise colour matching of CMYK output to PMS colours is not possible. However, we will do our best to match as closely as possible if you provide Pantone colour reference/s.
